## Present Position

Professor of Theoretical Physics and Mathematical Models at the University of Napoli *Federico II*.

## Synthetic Curriculum

Undergraduate degree (Laurea) in Naples in December 1979 discussing the thesis *Formalizzazione Geometrico-Differenziale di Alcuni Problemi di Elettromagnetismo* together with G. D'Angelo, advisors G. Marmo e F. Zaccaria. From 1980 to 1985 I have been graduate student, and teaching and research assistant, at Syracuse University (NY) where I earned my Ph. D. discussing the dissertation *The Theory and phenomenology of the Skyrme Model*, A.P. Balachandran supervisor. I have been Research Associate between 1985 and 1989 at the *Rutherford Appleton Laboratory* (Chilton, Oxford), and in the period 1989-1991 at the *International Centre for Theoretical Physics*, Trieste. From 1991 I have had a tenured position at the university of Napoli *Federico II*.

My research has been in theoretical physics, usually regarding its more formal aspects, although I have also published more phenomenological papers. Initially as

a student I worked on the Skyrme model, and topological solitons, producing important work on the three flavors model and states with higher baryonic number. Later I worked on some aspects of string theory: null string quantization (absence of critical dimension),  $N = 2$  superstrings, discretization of Witten string field theory and the Hagedorn transition seen as a nucleation model.

From 1994 I work on various aspects of *Noncommutative Geometry*. I have studied approximations of spaces with nontrivial discrete topologies (noncommutative lattices and fuzzy spaces). I have worked on the Connes and collaborators approach to the standard model, including its symmetry, cosmological and formal aspects. I have worked on the spectral action and its connection with renormalization and anomalies. I worked on the connection between string theory and noncommutative geometry, before the explosion of interest due to the paper of Seiberg and Witten (which cites my work). I worked on field (and gauge) theories on a variety of noncommutative spaces with alternative products, also connecting them with matrix models.

I feel I can say that I am one of the international leading figures in the study of physical applications of noncommutative geometry, as indicated by the invitations to participate and organize international meetings and sit on committees.

Most (but not all) of my papers have been written in collaboration. I have had the fortune to collaborate with 45 highly competent and gifted colleagues to date. Of these 30 are younger than I am. In all my collaborations my contribution has been essential.

I have taught undergraduate Quantum Mechanics for many years, and I have also taught Theoretical Physics, Advanced Quantum Mechanics, Classical Field Theory and Quantum Field Theory. In addition I have also taught General Physics for the undergraduate degrees in Farmaceutical Chemistry and Informatics. I have been involved at various time in the administration of the Department and the Faculty, and I am presently the Chairman of the Theoretical Physics Section. I have participated (often as Principal Investigator) to several successful competitive grant application. In particular I am presently the national PI of the INFN “Iniziativa Specifica” (National Thematic Research Project) GEOSYMQFT. I have been editor of a journal and referee of several, referee of national and international projects. I have been the advisor of six doctoral students and ten laurea magistrale (master) students.
